On-Demand Services

Hybrid Support Services
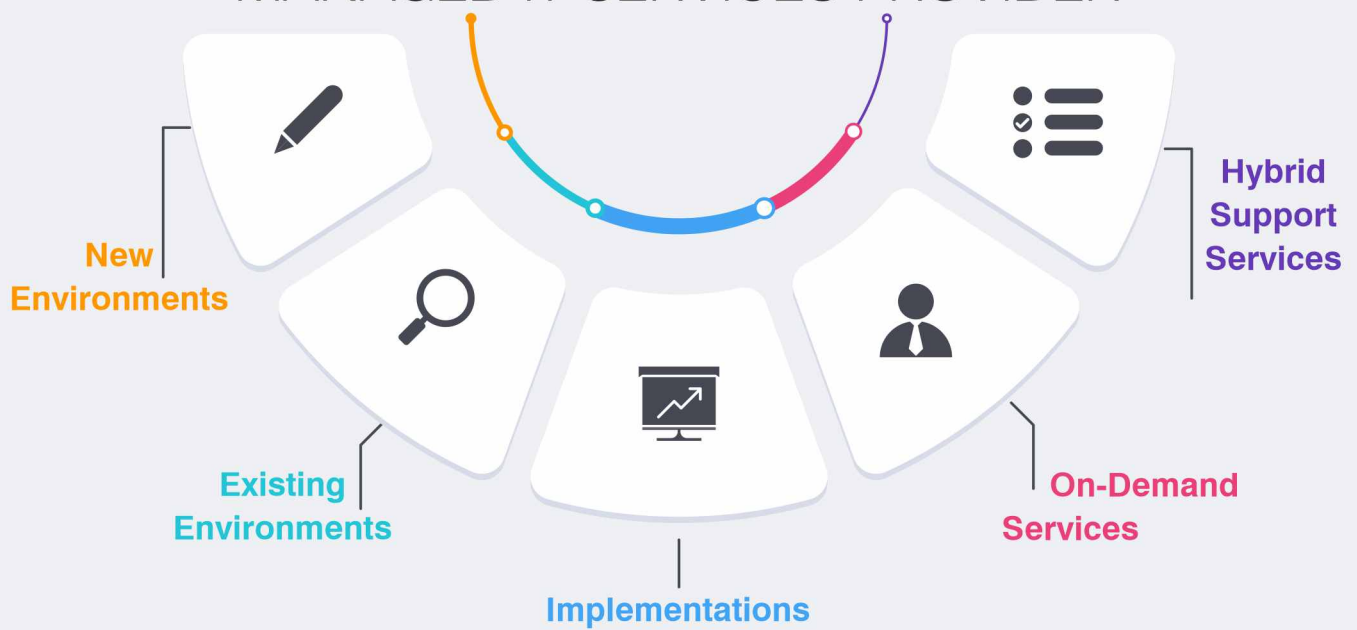

Cubix Tech offers both direct support, and Remote support from our Specialist NOC and SOC Technical Support teams. Our managed services delivers comprehensive support and protection directly from experienced experts to help businesses efficiently use customer solutions.

Cubix Tech MSP offers unlimited coverage and support in the field of Network Security, WAF, DDOS, SSLO and Network visibility and control and cloud security, posture management services with one simple contract.

These Managed Services combines the unique capabilities of local Certified Collaborative Support with the in-depth expertise and resources of Cubix Tech to keep your business secure and assures business continuity.

We offer dedicated 24/7 support for mission-critical issues with remote and hybrid support. Our services plans introduce a preemptive approach to security support with daily monitoring of your IT and cloud security Products, and proactive remediation of issues to prevent service downtime. You can rely on support from Cubix Tech for fast and efficient support that meets your needs - anytime, anywhere.

We offer enterprise-class **Managed Professional Services for your Security Operations and advance security threats** with expert technical consulting, and services support around various technologies globally.

## TYPE OF MANAGED SERVICES WE OFFER

### ARCHITECT

**Build the right architecture.**

Looking to migrate your apps to the cloud, automate deployments, or explore new application architectures? Take advantage of Cubix Tech's Definition Workshops to build the optimal security architecture to support your goals.

### IMPLEMENT

**Get it right the first time.**

Take advantage of the breadth and depth of solution knowledge that our consultants have amazed over thousands of deployments. We'll help you build a comprehensive plan based on best practices and provide the assistance you need to ensure success.

### MAINTAIN

**Keep things running smoothly.**

Whether you're planning an upgrade or migrating to new software or hardware, you can rely on our consultant's deep expertise to help ensure a smooth transition. We provide services including design review, product orientation, and application fine-tuning to help keep you running as efficiently as possible.

### OPTIMIZE

**Fine-tune your environment.**

Get more value out of your IT security investments by evaluating your current infrastructure, optimizing configurations, and leveraging advanced features. You'll be able to align to new business requirements and boost security, performance, and availability for your applications.
